

Department of Information Technology (DIT)

Data Center

- DIT's data center is designed, built, and operated according to industry leading standards to deliver top-tier redundancy and diversity.
- 30 KVA UPS of backup power for network connections (i.e. servers, switches) and cooling system in the computer room.
- Have state-of-the-art fire detection and pre-action fire suppression equipment for added safety.
- 8x5 staffing to provide site security and monitoring, including remote hand and remote monitoring during off hours.
- DIT has built multi-layered security systems to keep the equipment safe and sound. Code entry doors to the datacenter and computer room to provide a level of security.
- 24x7 digital cameras surveillances inside and outside the data center for security and monitoring.
- Raise floor in computer room for networking and cabling.
- Warm site failover.
- Disaster Recovery (DR) remote failover site.
